[Docket No. 97±054P]

RIN 0583–AC28

Retained Water in Raw Meat and Poultry Products; Poultry Chilling Performance Standards

AGENCY: Food Safety and Inspection Service, USDA. 

ACTION: Correction to proposed rule.

SUMMARY: This document contains corrections to the proposed rule (Docket No. 97–054P) which was published Friday, September 11, 1998 (63 FR 48961). The proposed rule would limit the amount of water retained by raw, single ingredient, meat and poultry products as a result of post-evisceration processing, such as carcass washing and chilling. The proposed rule also would revise the poultry chilling regulations to remove “command-and-control” features and make them consistent with current technological capabilities and good manufacturing practices.

Required to meet applicable food safety requirements, such as pathogen reduction performance standards. In addition, the establishment would have to disclose on the product label the maximum percentage of retained water that could be in the product.

FSIS is also proposing to revise the poultry chilling regulations to improve consistency with the Pathogen Reduction/Hazard Analysis and Critical Control Points (PR/HACCP) regulations, eliminate “command-and-control” features, and reflect current technological capabilities and good manufacturing practices.

Need for Correction

As published, the proposed rule contained errors in the regulatory text that could prove to be misleading because they reflect unintended changes in the current regulations and are inconsistent with the preamble explanation.

Correction of Publication

Accordingly, the publication on September 11, 1998, of the proposed rule (Docket No. 97–054P), which was the subject of FR Docket 98–24309, is corrected as follows:

§ 381.66 [Corrected] 

Paragraph 1. On page 48969, in the first column, paragraph (c)(3) is revised to read as follows:

“(c)(3) Previously chilled poultry carcasses and major portions shall be maintained constantly at 40 °F or below until removed from the vats or tanks for immediate packaging. Such products may be removed from the vats or tanks prior to being cooled to 40 °F or below, for freezing or cooling in the official establishment. Such products shall not be packed until after they have been chilled to 40 °F or below, except when the packaging will be followed immediately by freezing at the official establishment.”

14 CFR Part 39

[Docket No. 98–NM–232–AD]

RIN 2120–AA64

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the superseding of an existing airworthiness directive (AD), applicable to certain Boeing Model 747–400, 757, 767, and 777 series airplanes, that currently requires a revision to the Airplane Flight Manual (AFM) to prohibit certain types of approaches. That action also requires repetitive inspections to detect certain faults of all RIA–35B ILS receivers, and replacement of discrepant ILS receivers with new, serviceable, or modified units; or, alternatively, an additional revision to the AFM and installation of a placard to prohibit certain operations. That AD was prompted by a report of errors in the
